DOCKET NO.: VDX-5001USNP

Application No.: 10/781,036

Office Action Dated: July 20, 2006

**Listing of Claims**:

1-6, 9-15, 17. (Canceled)

- 7. (Currently Amended) A method for disrupting cells or tissue comprising placing a sample comprising <u>eukaryotic</u> cells or tissue in a container, adding a nucleic acid stabilizing solution to said container, placing a disruption element <u>having an outer</u> dimension of at least about 6mm and being only slightly smaller than the inside <u>dimension of said container</u> into said container, and employing a <u>said</u> disruption device for 45 seconds or less, removing cellular debris and other non-RNA materials from said sample, decanting the supernatant from said container, and extracting RNA from the decanted supernatant, and wherein said disruption element is in <u>mechanically imparted</u> rolling contact with the inner surface of said container and said sample <u>and wherein said rolling contact is not induced by sonication or vibration</u>.
- 8. (Previously presented) The method of claim 7 wherein the sample on which the disruption device is employed is a lymph node sample.
- 16. (Previously presented) The method of claim 7 conducted during the course of a surgical procedure on a sample obtained from a patient during the course of the procedure.
